

# ExecutiveUCPhone

*A revolutionary device that will change the way you communicate*

*The LG-Nortel 8540 Executive UC Phone gives you desktop access to an embedded Microsoft Office Communicator 2007 through a simple interface, and High Definition sound quality make this the most powerful IP phone available for the Microsoft OCS platform*

The LG-Nortel IP Phone 8540 is an intelligent IP phone designed to get the most out of Microsoft's unified communication platform. Combining advanced voice performance, people-centric design, and the advantages of embedded Microsoft® Office Communicator 2007 software, the reliable and powerful 8540 delivers HD sound quality and superior communication and collaboration for your colleagues.

For 8540 users, a 5.7" colour touch screen display and easy-to-use softkeys provide intuitive, fingertip control of the phone's rich communication functions. Contacts are dialed by name-rather than number-with the touch of a finger, and presence icons clearly signal their availability status. Users can even review schedules and access enterprise information through Microsoft® Office Communications Server 2007.

For your business, the 8540's intuitive user interface, automated maintenance, and secure login-via PIN or biometric fingerprint reader protect against misuse, help minimize installation and training resources, and reduce the burden on your helpdesk. The result is lower total cost of ownership, and a team that's working productively instead of struggling with their technology.

- ◆ Full colour 5.7" LCD Touch Screen
- ◆ Wide band Audio and Microsoft RTAudio Support
- ◆ Biometric Fingerprint reader for security and ease of access.
- ◆ Contact list and corporate directory directly from the OCS server.
- ◆ Microsoft Office Outlook calendar integration
- ◆ On screen keyboard and context sensitive softkeys
